Search Results

Nothing Found

Your search for the *Phrase* **(server specific database)<AND>(meta_published_date <= 09-01-2000)** did not return any results.

To search for *terms* separate them with **AND** or **OR**.

Click on the suggested options:

(server AND specific AND database)<AND>(meta_published_date AND <= AND 09-01-2000 AND)

(server OR specific OR database)(meta_published_date OR <= OR 09-01-2000 OR)

To search for names try using only the last or first name.

You may revise it and try your search again below or click advanced search for more options.

(server specific database)<AND>
(meta_published_date <= 09-01-
2000)

Complete Search Help and Tips

The following characters have specialized meaning:

Special Characters	Description
, () [These characters end a text token.
= > < !	These characters end a text token because they signify the start of a field operator. (! is special: != ends a token.)
` @ \Q < { [!	These characters signify the start of a delimited token. These are terminated by the end character associated with the start character.

- 1** The architecture of the EXODUS extensible DBMS 97%

 Michael J. Carey , David J. DeWitt , Daniel Frank , M. Muralikrishna , Goetz Graefe , Joel E. Richardson , Eugene J. Shekita

Proceedings on the 1986 international workshop on Object-oriented database systems September 1986

With non-traditional application areas such as engineering design, image/voice data management, scientific/statistical applications, and artificial intelligence systems all clamoring for ways to store and efficiently process larger and larger volumes of data, it is clear that traditional database technology has been pushed to its limits. It also seems clear that no single database system will be capable of simultaneously meeting the functionality and performance requirements of such a diver ...
- 2** Access support in object bases 84%

 Alfons Kemper , Guido Moerkotte

ACM SIGMOD Record , Proceedings of the 1990 ACM SIGMOD international conference on Management of data May 1990

Volume 19 Issue 2

In this work access support relations are introduced as a means for optimizing query processing in object-oriented database systems. The general idea is to maintain redundant separate structures (disassociated from the object representation) to store object references that are frequently traversed in database queries. The proposed access support relation technique is no longer restricted to relate an object (tuple) to an atomic value (attribute value) as in conventional ind ...
- 3** The use of a database machine for supporting relational databases 82%

 Jayanta Banerjee , David K. Hsiao

August 1978
